

Quick facts about AmpMe

Description: AmpMe is the mobile app that allows users play music in perfect sync across multiple devices to create one powerful sound system.

Background: AmpMe was launched in September 2015, and was founded by Martin-Luc Archambault. The idea came about a year earlier when Martin-luc was at a friend's new apartment celebrating her move. They wanted to listen to music, but she didn't have her speakers unpacked. They ended up putting a phone into a plastic cup to amplify the sound. Martin-Luc decided that there had to be a better solution to the problem, and he spent a year investing his own money to create what would become AmpMe.
